

## LORONIX TO PROTECT LIVES AND ASSETS

*Denver, CO* — Loronix has been selected by two more transportation properties in the United States to provide its digital Mobile Recorder system.

The \$1.6 million system being supplied to the Charlotte Area Transportation Authority in North Carolina will include systems on 285 buses. Each bus will be fitted with a six-camera system that will capture both video and audio. San Francisco Municipal's system includes coverage of 290 buses, all of which will be fitted with four cameras capturing video and audio.

The digital security system offers an easy-to-use graphical interface, clarity of the audio and video content captured by mobile devices, content management capabilities and compression technologies. A great tool for transportation properties for the protection of lives, assets and insurance liabilities, the system is expected to be installed for more transportation properties in the US and beyond as Loronix pursues other clients.
